

DatIQ's current tagline— *"Intelligence from every URL"*—is limited by its focus on tactical utility. It anchors the product as a point solution for single-page scraping rather than an enterprise platform that synthesizes web-wide signals.

Evaluating potential positioning options:

- **"Intelligence from Web"**: An improvement over URL-level messaging, but remains overly generic and lacks a clear revenue or business value driver.
- **"The Web & Revenue Intelligence Engine"**: Strongly aligns developer capabilities with Go-To-Market (GTM) outcomes, appealing directly to technical founders, RevOps teams, and growth leaders.
- **"Real-Time Web, Social, and Brand Intelligence"**: Directly highlights cross-channel coverage (web data + social listening + brand tracking).
- **Recommended Core Tagline: "Unified Web, Social, and Pipeline Intelligence"**
- **Secondary Enterprise Descriptor**: *"Transform unstructured web streams, social conversations, and market intent into automated revenue workflows."*

Homepage Hero Section Concepts

Concept 1: Developer & API-First Scraper Studio

- **Target Audience**: Software Engineers, Data Architects, AI Engineers, Product Managers.
- **Headline Copy**: Transform the Unstructured Web into Production-Ready Data Streams.

- **Subheadline Copy:** Extract, enrich, and deliver web data at scale. Stream LLM-ready Markdown, clean JSON, and dynamic browser interactions directly into your data warehouse or AI pipeline through a single unified API.
- **Primary Call to Action (CTA):** Start Building Free
- **Secondary Call to Action (CTA):** Explore API Documentation
- **Trust & Proof Signals:** SOC 2 Type II Certified, GDPR Compliant, 99.99% Uptime SLA, Powered by Stealth Headless Infrastructure.
- **Layout & Narrative:** Horizontal split layout (60% text/CTA on left, 40% interactive API playground on right). The playground lets users test live URL extractions, toggle JavaScript execution, view auto-generated Python/Node.js SDK snippets, and inspect real-time JSON payloads.

Concept 2: RevOps & Outbound Revenue Engine

- **Target Audience:** Chief Revenue Officers, VP of Sales Operations, Outbound Growth Leads.
- **Headline Copy:** Automate Sales Intelligence: From Web & Social Signals to Closed Deals.
- **Subheadline Copy:** Eliminate manual prospecting research. Detect account intent across web updates and social channels, enrich prospect profiles with Apollo, and trigger automated outreach directly inside HubSpot.
- **Primary Call to Action (CTA):** Book a RevOps Strategy Demo
- **Secondary Call to Action (CTA):** Calculate ROI Impact

- **Trust & Proof Signals:** Official HubSpot App Partner, Apollo Tier 1 Integration Partner, 250M+ Verified Profiles Access, ISO 27001 Security Standard.
- **Layout & Narrative:** Interactive visual node-based pipeline animation tracing a signal (e.g., executive hire on LinkedIn or price drop on a competitor site) moving through DatIQ, enriching via Apollo, updating HubSpot CRM, logging Calendly bookings, and triggering targeted email sequences.

Concept 3: Enterprise Market, Social, & Brand Radar

- **Target Audience:** Chief Marketing Officers, Brand Directors, PR & Communications Leads.
- **Headline Copy:** Real-Time Market Radar: Social Listening Meets Brand Intelligence.
- **Subheadline Copy:** Track brand sentiment, monitor competitor moves, and detect emerging market trends across Reddit, X, LinkedIn, YouTube, and digital news before they hit traditional reports.
- **Primary Call to Action (CTA):** Launch Interactive Radar
- **Secondary Call to Action (CTA):** Request Enterprise Trial
- **Trust & Proof Signals:** Multi-Platform Compliance Engine, Granular RBAC Permissions, Anomaly Spike Alerts.
- **Layout & Narrative:** Executive dark-mode dashboard mock-up featuring rolling net sentiment rings, real-time volume spike alerts, multi-brand Share of Voice matrices, and automated AI summary cards detailing recent sentiment shifts.

Competitive Ecosystem Benchmarking

DatIQ can be structured into five interconnected, monetization-ready modules:

Module 1: Web Data Studio (Core Engine)

- **Core Functionality:** Zero-code web extraction, dynamic JS rendering, HTML-to-Markdown conversion, anti-bot stealth proxy rotation, schema auto-detection, and Model Context Protocol (MCP) server support for AI agent integrations.
- **Target Users:** Developers, Data Engineers, AI Product Teams.
- **Commercialization:** Usage-based pricing based on extraction operations and bandwidth consumed.

Module 2: Social Media Intelligence & Sentiment Engine

* **Core Functionality:** Real-time listening across Reddit, X (Twitter), LinkedIn, YouTube, and global web news. Features NLP-driven sentiment analysis (Positive/Neutral/Negative), commercial intent tagging (e.g., purchase intent, churn risk), and keyword volume tracking.

- **Target Users:** Marketing Managers, Growth Marketers, Product Researchers.
- **Commercialization:** Tiered add-on based on tracked keyword topics and social stream volumes.

Module 3: Social Posts Writer, Thread Generator & Community Moderator

- **Core Functionality:** Converts extracted web content and trending social topics into optimized LinkedIn posts and X threads. Includes an AI moderation tool that scans brand post comments, flags negative sentiment, auto-drafts replies, and routes escalation tickets to support teams.

- **Target Users:** Content Strategists, Social Media Managers, Community Leads.
- **Commercialization:** User seat licenses combined with monthly AI generation token allowances.

Module 4: Brand & Positioning Intelligence Engine

- **Core Functionality:** Measures Share of Voice (SoV) against competitors, analyzes brand messaging consistency across web and social channels, and tracks brand visibility within AI search engines (Answer Engine Optimization / AEO monitoring). Features automated alert notifications for sudden PR or sentiment shifts.
- **Target Users:** CMOs, Brand Directors, Corporate Communications Teams.
- **Commercialization:** Enterprise tier module sold as a recurring annual platform license.

Module 5: Ecosystem Connectors & Revenue Automation

- **Core Functionality:** Pre-built bi-directional connectors for HubSpot, Apollo.io, Stripe, Calendly, Salesforce, Zapier, and n8n. Automatically transforms web extractions and social signals into updated CRM contact profiles, enriched company records, and automated sales outreach enrollments.
- **Target Users:** RevOps Directors, Outbound SDR Leads, CRM Administrators.
- **Commercialization:** Included in Professional and Enterprise subscription tiers.

12-Week Execution Roadmap (Phase 0 and Phase 1)

Phase 0: Core Platform Infrastructure (Weeks 1 to 4)

Sprint	Workstream	Primary Tasks & Technical Deliverables	Lead Role	Hours
Week 1	Platform Core	Multi-tenant PostgreSQL database deployment; ClickHouse analytical cluster configuration; Kafka	Principal Architect	70
Week 1	Ingestion Infrastru	Playwright headless browser grid setup; anti-bot stealth bypass layer; residential proxy pool rotation	Lead Scraping	80
Week 2	Extraction	LLM semantic parsing pipeline; HTML-to-clean-Markdown transformer; schema auto-inference	Senior ML Engineer	75
Week 2	Storage Layer	AWS S3 snapshot storage; Redis cluster for deduplication counters and rate-limit tracking.	Senior DevOps	60
Week 3	Core API Gateway	REST API endpoints deployment (/v1/extract, /v1/crawl, /v1/agent); JWT bearer authentication; token	Senior Backend	65
Week 3	Telemetry	OpenTelemetry integration; Prometheus and Grafana dashboards; health checks for proxy pool validation.	DevOps Engineer	50
Week 4	Security	Role-Based Access Control (RBAC); AES-256 encryption for API keys; TLS 1.3 encryption	Security Engineer	55
Week 4	Integration	End-to-end integration testing; performance load testing under high concurrency; OpenAPI 3.0	Full Stack Lead	60

Phase 1: Social Listening, Connectors, & Commercialization (Weeks 5 to 12)

Sprint	Workstream	Primary Tasks & Technical Deliverables	Lead Role	Hours
Weeks 5-6	Social Ingestion	Reddit PRAW API wrapper; X API v2 Filtered Stream listener; LinkedIn and Web News worker configuration.	Lead Scraping	110
Weeks 6-7	NLP & Analytics	Sentiment classification engine (VADER + LLM fallback); Named Entity Recognition (NER); intent tagging rules.	Senior ML	95
Weeks 7-8	HubSpot Connector	OAuth 2.0 handshake implementation; HubSpot REST API v3 sync engine (Contacts, Companies, Deals); webhook listeners.	Senior Backend	85
Weeks 8-9	Apollo Connector	Apollo REST API client (/v1/people/match, /v1/organizations/enrich); Redis leaky-bucket queue for rate	Backend	75

Weeks 9–10	Stripe Billing	Stripe Billing integration; subscription webhook engine; usage credit metering API (/v1/meter_events{start_span}[span_39](end_span){start_span})	Senior Backend	70
Weeks 11–12	Calendly	Calendly OAuth and webhook subscription setup (invitee.created, invitee.canceled); lead booking attribution	Backend	55
Week 11	Alerting	Anomaly detection service (volume spikes, sentiment drops); Slack Webhook, Email, and PagerDuty notification	Full Stack	80
Week 11	Frontend UI	React/Next.js dashboard implementation; live social feed module; interactive analytics charts; integration settings interface.	Lead Frontend	90
Week 12	Release & Deploy	End-to-end regression testing; staging deployment; security audit; production release deployment.	Principal Architect	80

Social Listening MVP Specification

Ingestion Architecture & Data Schemas

The Social Listening MVP uses an event-driven architecture. Platform-specific ingestion workers stream incoming social posts into a central Kafka pipeline, where they are enriched via NLP transformers and written to ClickHouse for real-time querying.

Raw Social Mention Schema (mentions_raw)

Field Name	Data Type	Database Index	Technical Purpose
mention_id	UUID	Primary Key	Unique internal system identifier.
platform	Enum	Indexed	Platform origin (reddit, twitter, facebook, etc.).
external_id	String	Unique	Platform-native post identifier.
author_handle	String	Nullable	Username or profile handle.
author_followers	Integ	Default 0	Author reach/follower count.
content{span_12}(start_span)	Text	Non-Null	Raw post text body.
source_url	String	Non-Null	Canonical source web link.
published_at	Date	Indexed	Original publication timestamp.
ingested_at	Date	Default NOW()	Ingestion processing timestamp.

Enriched Signal Schema (mentions_enriched)

Field Name	Data	Database	Technical Purpose
enrichment_i	UUID	Primary Key	Unique enrichment record ID.
mention_id	UUID	Foreign Key	References mentions_raw.mention_id.
sentiment_sc	Float	Range [-1.0, 1.0]	Calculated sentiment score.
sentiment_lab	Enum	Indexed	Tag (positive, neutral, negative).
intent_class	Enum	Indexed	Intent (purchase_intent, churn_risk,
entities_name	JSONB	GIN Indexed	Named entities (Companies, Products,
reach_score	Float	Calculated	Calculated impact (followers *

Dashboard Mockup Specifications

- **Live Stream Feed Module:** Displays an updating stream of incoming mentions. Each item includes author metadata, platform source badges, reach metrics, highlighted keyword matches, and sentiment tags. Users can push any high-intent mention directly into HubSpot as a CRM lead.
- **Net Sentiment & Volume Trajectory Chart:** Interactive dual-axis line chart mapping rolling mention volumes against net sentiment over 24-hour, 7-day, or 30-day windows.
- **Share of Voice (SoV) Comparison Matrix:** Side-by-side donut charts and bar graphs comparing brand mention volume, audience reach, and net sentiment against designated market competitors.
- *Emerging Keyword Cluster Map:* Visual topic graph highlighting co-occurring keywords, emerging market trends, or bug reports across conversational streams.

Alerting Engine & Anomaly Detection

- **Trigger Conditions:**
 1. *Volume Spike:* Topic mention volume increases by >300% relative to its 1-hour rolling average.

2. *Negative Sentiment Drop*: Negative sentiment exceeds 40% of total volume in a 30-minute window.

3. *High-Impact Mention*: An account with >100,000 followers or a verified executive handle posts about a tracked keyword.

- **Suppression Protocol**: To prevent alert fatigue during viral events, the system enforces a 30-minute Redis-backed suppression cooldown per topic cluster.

Technical Integration Blueprints

HubSpot CRM Connector

- **Authentication**: OAuth 2.0 with authorization code grant. Scopes required: `crm.objects.contacts.read/write`, `crm.objects.companies.read/write`, `crm.objects.deals.read/write`.
- **Sync Strategy**: Bi-directional real-time sync via Webhooks (`contact.creation`, `company.creation`) and REST API v3.
- **Field Mapping Matrix**:

DatIQ Field Name	Target HubSpot	Target HubSpot Property
enriched_person.email	Contact	email
enriched_person.job_title	Contact	jobtitle
enriched_person.linkedin_u	Contact	linkedin_bio
enriched_company.name	Company	name
enriched_company.domain	Company	domain
enriched_company.headco	Company	numberofemployees
social_signal.sentiment_sc	Contact / Company	datiq_intent_score (Custom

Stripe Billing Integration

- **Authentication**: Restricted Secret API Keys + Webhook HMAC SHA-256 signature verification.

- **Event Handlers:**

- `customer.subscription.created`: Provisions workspace API keys and sets credit limits.
- `customer.subscription.deleted`: Revokes production API keys and downgrades workspace.
- `invoice.payment_succeeded`: Resets monthly usage credit counters.

- **Metering Architecture**: Outbound API request counts and proxy bandwidth usage are reported to Stripe's Usage Metering API (`/v1/meter_events`).

Calendly Connector

- **Authentication**: OAuth 2.0 / Personal Access Tokens. Listens to `invitee.created` webhooks.
- **Workflow**: When a prospect books a meeting via Calendly, DatIQ extracts the email, triggers an Apollo lookup to enrich the contact's professional profile, updates or creates the lead record in HubSpot, and logs lead score metrics for the assigned rep.

Apollo.io Connector

- **Authentication**: Custom Header (X-API-Key).
- **Core Endpoints Implemented**:
 - `POST /v1/people/match`: Enriches individual contact profiles.
 - `POST /v1/organizations/enrich[span_92](start_span)[span_92](end_span)[span_95](start_span)[span_95](end_span)`: Enriches target company profiles.

- **Rate Limit Management:** Requests pass through an asynchronous Redis token-bucket queue. Bulk enrichment requests run at 50% of single-call rate limits to prevent quota exhaustion.

Commercial Model & Financial Projections

Packaging and Subscription Tiers

DatIQ operates on a hybrid subscription model combining predictable base fees with usage-based add-ons:

- **Starter Tier (\$99/month):**
 - Includes 25,000 extraction credits.
 - Zero-code scraper & clean Markdown/JSON export.
 - Standard API access & community support.
- **Professional Tier (\$499/month):**
 - Includes 150,000 extraction credits.
 - Social Listening MVP (5 tracked topics).
 - Connectors for HubSpot, Apollo, Stripe, and Calendly.
 - Real-time Slack & Email alerts.
- **Enterprise Tier (\$1,999/month):**
 - Includes 750,000 extraction credits.
 - Social Listening & Brand Positioning Engine (25 tracked topics).
 - Dedicated proxy infrastructure pools.
 - Custom Webhooks, SSO/SAML, and SOC 2 security compliance.

○ **Modular Expansion Add-Ons:**

- *Additional Extraction Credits:* \$0.75 per 1,000 additional page operations.
- *Social Topic Packs:* \$150/month per 5 additional keyword tracking topics.
- *Dedicated Proxy Pool:* \$250/month for isolated residential IP bandwidth.

Unit Economics Model (Cost per 1,000 Operations)

- **Proxy Bandwidth:** \$0.18 / 1,000 extractions (residential IP pool usage).
- **Headless Compute Infrastructure:** \$0.22 / 1,000 execution sessions.
- **LLM & NLP Inference:** \$0.12 / 1,000 extraction/sentiment calls.
- **Third-Party API Overhead (Apollo):** \$0.08 / 1,000 calls.
- **Total Direct COGS: \$0.60 per 1,000 Operations**
- **Target Gross Margin: 80.0%**

3-Year Financial Model & Growth Trajectory

Performance Metric	Year 1 (Post- Launch)	Year 2	Year 3
Starter Workspaces (\$99/mo)	350 Workspaces	1,200	3,500
Professional Workspaces (\$499/mo)	85 Workspaces	350	950
Enterprise Workspaces (\$1,999/mo)	10 Workspaces	50 Workspaces	180
Total Active Customers	445 Accounts	1,600 Accounts	4,630 Accounts
Monthly Recurring Revenue (MRR)	\$96,945	\$3,96,650	\$11,80,670
Annual Recurring Revenue (ARR)	\$11,63,340	\$47,59,800	\$1,41,68,040
Blended Gross Margin (%)	76.5%	81.2%	83.8%
Customer Acquisition Cost (CAC)	\$420	\$380	\$340

Customer Lifetime Value (LTV)	\$3,850	\$5,200	\$6,400
LTV / CAC Ratio	9.17x	13.68x	18.82x
CAC Payback Period	4.8 Months	3.9 Months	3.2 Months

Key Strategic Recommendations

- 1. Reposition the Brand:** Adopt *"Unified Web, Social, and Pipeline Intelligence"* as the primary tagline. Update the homepage with segmented hero concepts tailored to Developers, RevOps leaders, and CMOs.
- 2. Execute Phase 0 Technical Foundations:** Focus the first 4 weeks on building out the scalable Playwright scraping grid, proxy rotation manager, and high-throughput Kafka streaming pipeline.
- 3. Launch the Social Listening MVP:** Deploy multi-platform ingestion across Reddit, X, LinkedIn, and Web News to expand beyond traditional URL-based scraping.
- 4. Commercialize Native Connectors:** Roll out pre-built HubSpot and Apollo connectors to position DatIQ as an essential revenue automation engine for outbound sales and GTM teams.

Strategic Blueprint: Rebranding and Expanding DatIQ into an Enterprise Web and Data Intelligence Platform

Executive Summary and Strategic Context

The digital intelligence landscape is undergoing a structural consolidation. Standalone web scraping utilities and single-point data enrichment tools are rapidly losing ground to unified platforms capable of synthesizing unstructured web extractions, real-time social streams, and enterprise CRM data into automated revenue workflows. Currently positioned as a zero-code web extraction engine with modular artificial intelligence enrichment capabilities, DatIQ possesses the core pipeline architecture required to capitalize on this market transition.

To lead this market evolution, DatIQ must execute a comprehensive transformation into an Enterprise Web and Data Intelligence Platform. This strategic transformation requires a five-part execution plan: a brand repositioning that targets technical and RevOps leaders; an operational 12-week engineering execution roadmap; a Social Listening Minimum Viable Product (MVP) specification; a technical connector integration plan spanning HubSpot, Stripe, Calendly, and Apollo; and a unit-economic model designed for scalable enterprise tier expansion.

Brand Repositioning and Homepage Hero Visual Concepts

Strategic Value Proposition Architecture

DatIQ's repositioning moves the core message away from a tactical utility—extracting web data in seconds via zero-code tools—and toward an enterprise revenue and market intelligence platform. The revised architecture unifies three primary product capabilities into a cohesive platform narrative:

Hero Concept 1: Developer and API-First Scraper Studio

Hero Concept 2: RevOps and Go-to-Market Revenue Intelligence

Hero Concept 3: AI-Driven Enterprise Market and Social Intelligence

12-Week Execution Sprint Plan (Phase 0 and Phase 1)

The technical execution roadmap spans 12 weeks, structured into Phase 0 (Platform Core and Infrastructure) and Phase 1 (Social Listening MVP, Commercial Connectors, and Modular Billing).

Phase 0 Execution Roadmap: Core Platform Infrastructure (Weeks 1 to 4)

Sprint	Core Works	Tasks & Technical Deliverables	Primary Lead	Engineering
Week 1	Core Architecture	Multi-tenant PostgreSQL schema deployment; ClickHouse cluster setup for query logging; Kafka message pipeline setup.	Principal Software Architect	70 Hours
Week 1	Ingestion Engine	Headless Playwright browser grid integration; anti-bot evasion framework; proxy rotation manager with residential IP pools.	Lead Data Scraping Engineer	80 Hours
Week 2	Extraction	LLM semantic parser development; HTML-to-clean-Markdown converter; zero-code field mapping	Senior ML Engineer	75 Hours
Week 2	Storage	S3 bucket allocation for raw HTML DOM snapshots; Redis cluster setup for page	Senior DevOps	60 Hours
Week 3	Core API	API endpoints deployment (/v1/extract, /v1/crawl, /v1/agent); JWT bearer authentication; Redis token-	Senior Backend	65 Hours
Week 3	Telemetry	Prometheus and Grafana monitoring; OpenTelemetry distributed tracing; automated	DevOps Engineer	50 Hours

Week 4	Security	Role-Based Access Control (RBAC) implementation; AES-256 encryption for customer data.	Cloud Security	55 Hours
Week 4	Platform	End-to-end integration testing of extraction engine; load testing (100 concurrent sessions); OpenAPI spec.	Full Stack Lead	60 Hours

Phase 1 Execution Roadmap: Social Listening, Connectors, & Commercialization (Weeks 5 to 12)

Sprint	Core Works	Tasks & Technical Deliverables	Primary Lead	Engineering
Weeks 5-6	Social Ingestion	Reddit API (PRAW) stream ingestion; X API v2 Filtered Stream integration; LinkedIn and Web News scraping worker setup.	Lead Data Scraping	110 Hours
Weeks 7-8	NLP & Analytics	Real-time sentiment scoring engine (VADER + LLM fallback); Named Entity Recognition (NER) pipeline; Topic modeling.	Senior ML Engineer	95 Hours
Weeks 9-10	HubSpot	OAuth 2.0 handshake implementation; HubSpot REST API v3 sync engine (Contacts, Companies, Deals).	Senior Backend	85 Hours
Weeks 11-12	Apollo Connect	Apollo REST API client integration (/v1/people/match, /v1/organizations/enrich); rate-limit request handling.	Backend Engineer	75 Hours
Weeks 13-14	Stripe Billing	Stripe Billing Engine setup; subscription webhook processor; usage credit metering API (/v1/usage).	Senior Backend	70 Hours
Weeks 15-16	Calendly	Calendly OAuth and Webhook subscriber setup (invitee.created, invitee.canceled); meeting event processing.	Backend Engineer	55 Hours
Week 17	Alerting	Anomaly detection service (volume spikes and sentiment drops); Slack Webhook, Email alerts.	Full Stack Engineer	80 Hours
Week 18	Dashboard	React/Next.js dashboard buildout; live social feed module; interactive analytics charts; integration with alerting.	Lead Frontend	90 Hours
Week 19	Staging & Release	Regression testing; staging deployment; security penetration audit; user access validation; production release deployment.	Principal Architect & QA	80 Hours

Critical Path Risk and Operational Mitigation Analysis

The engineering execution plan addresses three main technical risks that could impact project timelines:

Anti-bot evasion techniques present an ongoing challenge as security platforms regularly update Cloudflare challenges, dynamic DOM modifications, and TLS fingerprinting routines. To mitigate this risk, the infrastructure team will implement a managed browser

persistence layer alongside automated proxy routing across datacenter, residential, and mobile IP pools. This setup bypasses access blocks and prevents extraction failures on protected target domains. [1][2]

Upstream rate limiting from third-party APIs can create processing bottlenecks during peak traffic. B2B enrichment providers enforce strict per-minute and per-day API call limits. To address this constraint, the pipeline uses an asynchronous Redis-backed Leaky Bucket queue. The queue manages request volumes, enforces concurrency caps on single-person lookups, and batches bulk enrichment requests. [1][2]

Data schema drift on target websites poses an ongoing risk to scraper stability, as UI updates can invalidate traditional CSS selectors and XPath expressions. To solve this, the extraction pipeline relies on semantic LLM parsing as a fallback. When structural selector path checks fail, the system analyzes the visual and semantic context of the DOM to maintain uninterrupted data extraction. [1][2]

Social Listening MVP Feature Specification

The Social Listening MVP collects, parses, and aggregates multi-platform public social commentary into structured metrics, surfacing actionable brand and market intelligence.

Ingestion Architecture and Event Flow

The ingestion architecture uses a distributed event-driven model to capture real-time social conversations. Platform-specific workers stream content into a central Kafka message broker:

Incoming raw mentions enter the Kafka message queue and pass through an NLP processing pipeline that evaluates sentiment

polarity, identifies named entities, and flags user intent. Enriched mentions are stored in a ClickHouse analytical database, making them available for real-time dashboard visualization and alert processing. [1][2]

Ingestion Data Schemas

Raw Social Mention Schema (mentions_raw)

Column	Data	Database	Description
mention_id	UUID	Primary Key	Unique internal system identifier for the
platform	Enum	Indexed	Originating platform (reddit, twitter, linkedin,
external_id	String	Unique Index	Platform-native identifier (e.g., Tweet ID,
author_han	String	Nullable	Username or profile handle of the author.
author_follo	Integer	Default 0	Total audience reach or follower count at
content_bo	Text	Non-Null	Unstructured text body of the post or
media_urls	Array(Str	Nullable	Direct links to attached images or video
source_url	String	Non-Null	Canonical web link to the source post.
published_a	DateTim	Indexed	Original publication timestamp from the
ingested_at	DateTim	Default NOW()	System timestamp when the post entered the

Enriched Signal Schema (mentions_enriched)

Column	Data	Database	Description
enrichment	UUID	Primary Key	Unique record identifier for the enriched signal.
mention_id	UUID	Foreign Key	Links directly to mentions_raw.mention_id.
sentiment_	Float	Range [-1.0,	Calculated sentiment polarity score.
sentiment_l	Enum	Indexed	Categorical classification (positive, neutral,
intent_clas	Enum	Indexed	Detected commercial intent (churn_risk,
entities_na	JSONB	GIN Indexed	Extracted entities (Companies, Products,
key_phrase	Array(St	Nullable	Salient topics and key phrase clusters.
reach_scor	Float	Calculated	Impact score (author_followers *
processed_	DateTim	Default NOW()	System timestamp when NLP enrichment

Aggregated Topic Metrics Schema (topic_metrics)

Column Name	Data	Database	Description
metric_id	UUID	Primary Key	Unique metric aggregation record ID.
topic_keyword	String	Indexed	Tracked keyword or competitor brand
time_bucket	DateTim	Indexed	Aggregation window (1-hour or 1-day
total_mentions	Integer	Non-Null	Aggregate mention count within time
pos_sentiment	Integer	Default 0	Count of positive mentions in bucket.
neg_sentiment	Integer	Default 0	Count of negative mentions in bucket.
total_reach_vol	BigInt	Default 0	Summed reach scores across all bucket

Dashboard Interface Specifications

Alerting Engine Architecture and Notification Protocols

The alerting engine monitors incoming data streams for volume spikes, negative sentiment drops, and high-impact discussions, routing notifications through configured communication channels.

Event Trigger Rules

- **Volume Anomaly Threshold:** Triggers when mention volume for a tracked keyword rises by more than 300% over its rolling 1-hour historical baseline.
- **Crisis Sentiment Threshold:** Triggers when negative sentiment mentions exceed 40% of total topic volume within a 30-minute window.
- **High-Impact Influencer Threshold:** Triggers when an author account with over 100,000 followers or a verified executive handle mentions a tracked brand term.

Alert Evaluation and Dispatch Flow

When an incoming mention is processed, the anomaly evaluator evaluates the signal against active workspace alert rules. If a rule condition is met, the system verifies the event against a Redis-backed suppression cache. If no matching alert has been dispatched within the 30-minute suppression window, the event payload is formatted and sent to Slack webhooks, SendGrid email templates, and PagerDuty endpoints. The event is then logged in ClickHouse for historical audit reporting.

Alert Suppression and Deduplication Protocol

To prevent alert fatigue during viral news events, the system maintains a 30-minute deduplication window in Redis. When an alert fires for a specific keyword cluster, duplicate alerts for that cluster are suppressed for 30 minutes, while background analytics logging continues uninterrupted.

Technical Connector Implementation Plan

HubSpot CRM Connector Architecture

- **Authentication Mechanism:** Uses OAuth 2.0 with authorization code grant. The integration requires explicit permissions: `crm.objects.contacts.read`, `crm.objects.contacts.write`, `crm.objects.companies.read`, `crm.objects.companies.write`, `crm.objects.deals.read`, and `crm.objects.deals.write`. Access tokens refresh automatically, with refresh tokens securely stored using AES-256 encryption.
- **Webhook Ingestion Endpoints:** Implements a webhook listener endpoint (`/api/v1/hooks/hubspot`) that processes real-time HubSpot events: `contact.creation`, `contact.propertyChange` (monitoring email and title updates), `company.creation`, and `deal.creation`.

- **Data Mapping Architecture:** Maps extracted web data and social signals directly to native and custom HubSpot CRM object properties:

DatIQ Source Data Attribute	Target HubSpot Object	Target HubSpot Property API Name
-----------------------------	-----------------------	----------------------------------

DatIQ Source Data Attribute	Target HubSpot Object	Target HubSpot Property API Name
-----------------------------	-----------------------	----------------------------------

enriched_person.email	Contact	email
-----------------------	---------	-------

enriched_person.first_name	Contact	firstname
----------------------------	---------	-----------

enriched_person.last_name	Contact	lastname
---------------------------	---------	----------

enriched_person.job_title	Contact	jobtitle
---------------------------	---------	----------

enriched_person.linkedin_url	Contact	linkedin_bio
------------------------------	---------	--------------

enriched_company.name	Company	name
-----------------------	---------	------

enriched_company.domain	Company	domain
-------------------------	---------	--------

enriched_company.headcount	Company	numberofemployees
----------------------------	---------	-------------------

enriched_company.industry	Company	industry
---------------------------	---------	----------

social_signal.sentiment_score	Contact / Company	datiq_intent_score (Custom Property)
-------------------------------	-------------------	--------------------------------------

Stripe Billing Connector Architecture

- **Authentication & Security Protocols:** Uses restricted API keys for outbound server-to-server calls and validates incoming webhooks using HMAC SHA-256 signature checks on the Stripe-Signature request header.

- **Webhook Subscription Lifecycle:** Listens to core subscription lifecycle events to manage customer access rights:

- customer.subscription.created: Provisions initial subscription allowances and issues production workspace API keys.

- customer.subscription.updated: Modifies access rights immediately upon plan upgrades or downgrades.

- `customer.subscription.deleted`: Revokes active production API keys and updates the workspace to read-only mode.
- `invoice.payment_succeeded`: Resets monthly extraction and enrichment credit counters.
- `invoice.payment_failed`: Initiates dunning workflows and displays billing alerts within the platform UI.
- **Usage-Based Credit Metering**: Tracks extractions and enrichment calls, sending usage events to the Stripe Metering API (`/v1/meter_events`). Requests use idempotency keys constructed from the workspace ID and operation timestamp to ensure accurate billing.

Calendly Connector Architecture

Apollo.io Connector Architecture

Connector Operational Architecture Matrix

Integrated	Authentication	Sync Directionality	Primary Endpoints /	Rate Limit Strategy	Retry & Error Architecture
HubSpot	OAuth 2.0 Bearer	Bi-directional Sync	<code>/crm/v3/objects/*</code> / <code>events/v3/</code>	150 requests /	Exponential backoff (3
Stripe	Secret Key / Webhook	Inbound Webhook /	<code>/v1/subscriptions</code> / <code>v1/meter_events</code>	100 requests /	Idempotency keys + 5-day
Calendly	OAuth 2.0 /	Inbound Hook -> Pipeline	<code>/v2/webhook_subscript</code>	600 requests /	Exponential backoff (4
Apollo.io	Custom Header (X-	Outbound Query ->	<code>/v1/people/match</code> / <code>v1/organizations/</code>	Queue-governed	Redis queue rate-governor ->

Modular Commercial Model, Unit Economics, and Financial Projections

Modular Commercial Tiering Structure

DatIQ's commercial strategy uses a modular subscription model that combines predictable base subscription tiers with usage-based add-ons:

Unit Economics Model (Cost per 1,000 Operations)

The operational model targets an overall gross margin of 80% across commercial tiers by managing compute, bandwidth, and API consumption costs:

Direct Operational	Cost Metric	Unit Cost per	COGS	Primary Cost Optimization Mechanism
Proxy Bandwidth	Residential IP Data	\$0.18 / 1,000	30.0%	Smart routing: defaults to datacenter IPs when target anti-bot rules permit.
Headless Compute	AWS Fargate /	\$0.22 / 1,000	36.7%	Reuses browser contexts and terminates connections post-DOM completion.
LLM Inference	Semantic &	\$0.12 / 1,000	20.0%	Uses fine-tuned smaller models (Llama 3 8B) for standard parsing, using larger
Enrichment API	Apollo / Third-	\$0.08 / 1,000	13.3%	Caches entity lookups in Redis to eliminate duplicate upstream API queries.
Total Direct COGS	Per 1,000 Operation	\$0.60 / 1,000	100.0%	Target Gross Margin Target: 80.0%

Three-Year Financial Model and Revenue Projections

The financial model projects steady subscription growth following the Week 12 commercial launch. Revenue expansion is driven by developer adoption, RevOps content marketing, and direct sales outreach to enterprise mid-market accounts.

Core Financial & Scale Metric	Year 1 (Post-	Year 2	Year 3
Starter Tier Workspaces (\$99/	350 Workspaces	1,200	3,500
Professional Workspaces	85 Workspaces	350	950
Enterprise Workspaces	10 Workspaces	50 Workspaces	180
Total Paying Workspaces	445 Workspaces	1,600	4,630
Monthly Recurring Revenue	\$96,945	\$3,96,650	\$11,80,670
Annual Recurring Revenue	\$11,63,340	\$47,59,800	\$1,41,68,040
Blended Gross Margin (%)	76.5%	81.2%	83.8%
Customer Acquisition Cost	\$420	\$380	\$340
Customer Lifetime Value (LTV)	\$3,850	\$5,200	\$6,400
LTV to CAC Ratio	9.17x	13.68x	18.82x
Average CAC Payback Period	4.8 Months	3.9 Months	3.2 Months
