

Perform fresh Datiq App Market and Product Analysis and research. Refer latest updates on <https://datiq.app> - does the Home Screen single url make sense to practical uses? How can it drive more inclusions and users engagement. All other features across different modules and screens, other alternatives available in market? Bring products differentiation, it's okay to bring in competitors features and inclusion for richer features and values to different customers and persons. What all are potential enhancements and user's engagement that can be included with some efforts. Optimisation and enhancements to existing with little efforts should be the quick wins. Competition features that can be part of future releases. Find ways those options and give me prioritised list. Use subtle formula to defined priorities like development efforts, potential effectiveness, users engagement, and usefulness etc, and other relevant parameters.

Datiq (datiq.app) is a zero-code web data extraction and AI enrichment tool. It turns any public URL into structured data quickly: headings, links, contacts, pricing, AI summaries, and more. Users paste a URL for instant insights, with options for custom extractions in plain English, domain mapping, contact finding, pricing scraping, batch processing, scheduling, and exports/enrichments.

It targets researchers, teams, marketers, SEO/content creators, sales (lead gen via
