

every URL" and the competitive landscape.

1. Rebrand: Why "Intelligence from every URL" is too small

"Intelligence from every URL" = a feature. It says *what* you do, not *why* someone pays.

You are moving from **Extractor** → **Intelligence OS**.

Competitors prove it:

- **Firecrawl / Exa / Tavily** own "extract": Firecrawl excels at extracting full page content, Exa provides semantic search tuned for AI, Firecrawl offers /search, /scrape, /crawl in one stack. That's commoditized. 
- **Brandwatch / Sprout** own "listening": Brandwatch pulls from 100M+ sources with research-grade sentiment, Sprout provides sentiment, theme detection, spike alerts and tracks 60-75% sentiment accuracy. 
- **Apollo / HubSpot connectors** own "activation": Leadpicker-style agents connect to HubSpot, Salesforce with pre-built connectors, Apollo has deep bi-directional CRM sync. 

Your whitespace: None of them connect Web → Social → Brand → Action in one place. Clay does it for sales, Brandwatch for listening, but no one for Growth Teams.

Positioning Options (pick one)

Option A - Growth Teams (my recommendation):

DatIQ - The Web Intelligence OS

Tagline: Turn the Living Web into Revenue 

Best for Apollo/HubSpot buyer.
